Do you know the symptoms of cervical cancer?

The most common symptoms include:

1. Unusual vaginal bleeding: after menopause, between regular periods or after sex.
2. Unexplained pain in your lower back or between your hip bones (pelvis).
3. Pain during sex.
4. Changes to vaginal discharge.

These symptoms are not usually cervical cancer, but it’s important to seek medical attention from your VHT, health center or hospital to get screened and treated.
Cervical cancer is preventable and can be treated, if detected early.

Visit the following health centers in your area for cervical cancer screening now:

- Masaka HC III
- Birembo HC III
- Mpasaana HC III
- Kisengwe HC III
- Kitaihuka HC III
