More than 90% of deaths due to cervical cancer are in low and middle-income countries. This artificial intelligence improves diagnostic precision and makes the health worker’s task easier.

Self-testing makes things much easier for women. If the result is negative, they do not need further examination in a clinic.

PRESCRIP-TEC has introduced artificial intelligence as part of the gynaecological examination for those women who have a human papillomavirus infection.

More than 90% of deaths due to cervical cancer are in low and middle-income countries. PRESCRIP-TEC contributes to effective and innovative cervical cancer prevention in resource-poor or hard-to-reach settings in the world.

The system indicates that it is very likely that you have precancerous lesions. In Africa, 90% of deaths due to cervical cancer are in low and middle-income countries. We provide women who need treatment for cervical lesions with immediate assistance or refer them to other medical services when necessary.

We start by informing and sensitising women about the screening process via the most popular media channels in their communities.

We provide women who need treatment for cervical lesions with immediate assistance or refer them to other medical services when necessary.

If the result is negative, what was your result?

The system indicates that it is very likely that you have precancerous lesions. In the lesions are off a little on early stage, the thermal-ablation will be sufficient to remove them before they become an invasive tumour.

If you have already been diagnosed and treated in time, you should get screened.

Did you know that cervical cancer is a lethal disease but preventable through HPV vaccination and regular screenings?

If you have already been diagnosed and treated in time, you should get screened.

With this new methodology, advanced instruments and the presence of a gynaecologist are not needed.

You should have regular screenings to always keep the risk of cervical cancer under control.

With this new methodology, advanced instruments and the presence of a gynaecologist are not needed.

You are now out of danger, you were very lucky to have been diagnosed and treated in time.

With all these activities, PRESCRIP-TEC promotes the strategy that the World Health Organization has developed to eliminate cervical cancer as a public health problem in the 21st century.

Did you know that cervical cancer is a lethal disease but preventable through HPV vaccination and regular screenings?

Sure! Besides, it is free of charge!
