More than 12 women die every day from cervical cancer in Uganda. This should not happen because we have all the tools we need to prevent it.

The avoidable path to cervical cancer

Can be prevented by HPV vaccination
HPV Infection
Usually the immune system clears the infection, but sometimes it leads to cell changes

Can be detected in time through regular screenings
Precancerous lesions
If left untreated, uncontrolled growth of abnormal cells can become cancer

Can be prevented by treatment of precancerous lesions
Cervical Cancer
Every year we lose 4,600 women in Uganda due to cervical cancer

What is PRESCRIP-TEC doing in Uganda?

Informing and sensitising women about the screening process for higher accessibility and acceptability of the screening programs.

Facilitating self HPV testing at home to make things easier for women living in remote areas.

Introducing artificial intelligence in the gynaecological examination to improve diagnosis precision and to make work easier for health workers.

Providing women who need treatment of precancerous lesions immediate assistance.
